EXP:04 REPORT USING ZOHO CREATOR
(STUDENT ATTENDANCE MANAGEMENT SYSTEM)

1.Introduction

The **Student Attendance Management System** is a low-code application developed using **Zoho Creator**. It is designed to digitally manage student details and attendance records.

The system helps faculty members record attendance, view attendance reports, filter Present and Absent records, and analyze attendance using a chart. It reduces manual work and keeps attendance information organized.

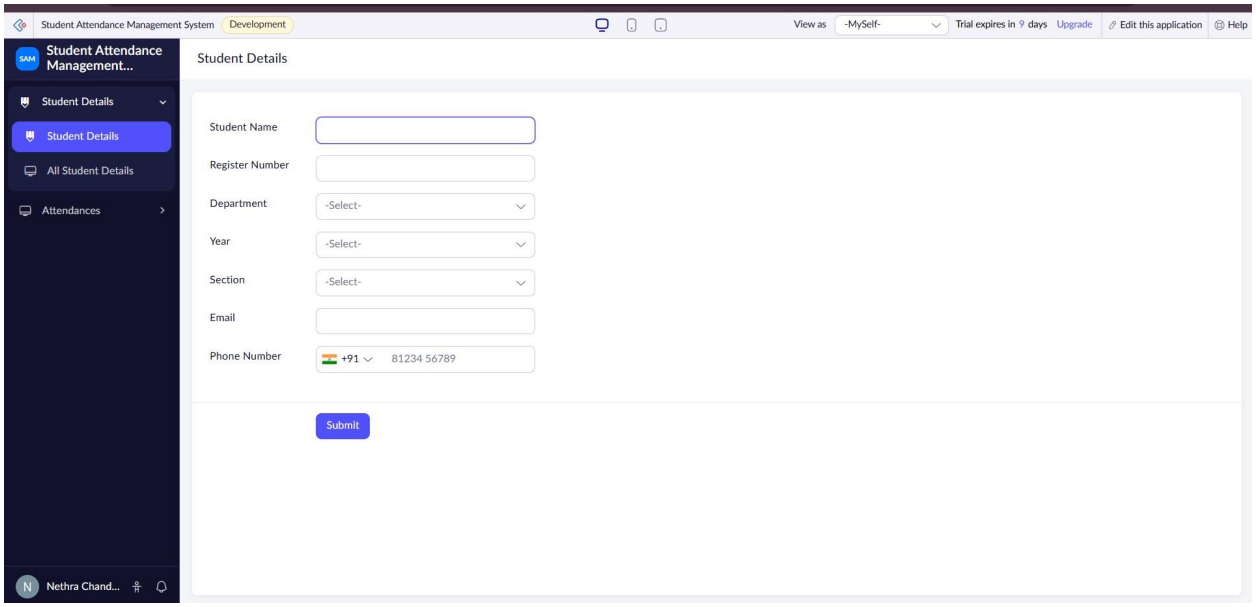

Figure 1 – Student Details

2.Objectives

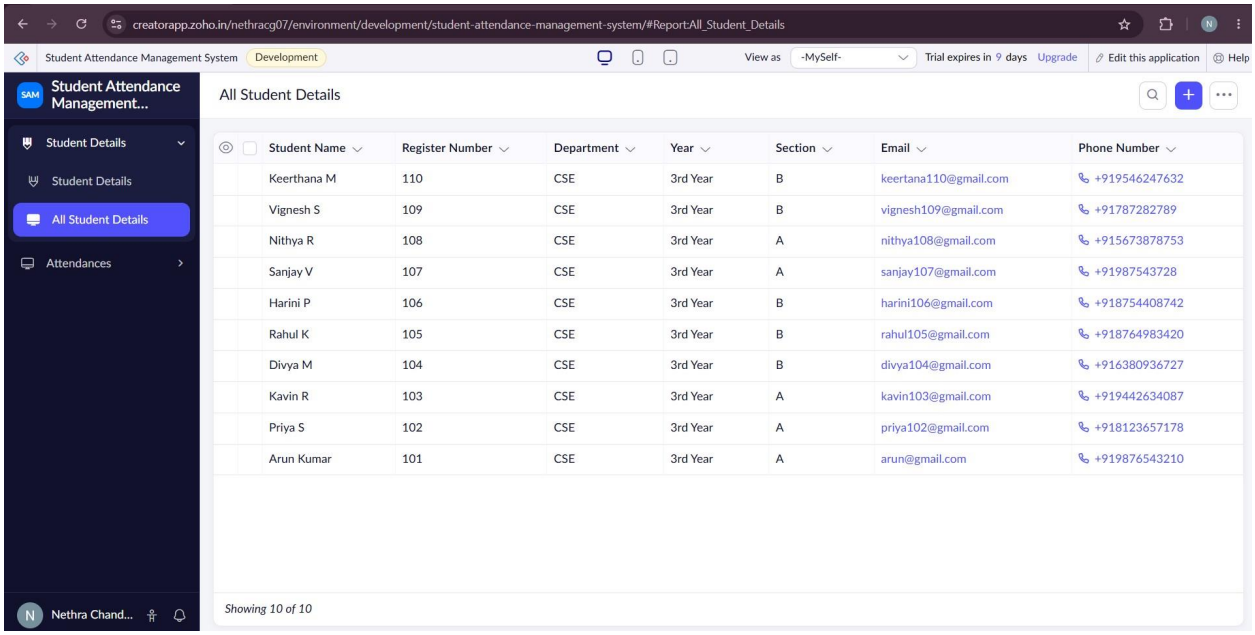

The main objectives of the system are:

- To maintain student information digitally.
- To record student attendance efficiently.
- To reduce manual attendance work.

- To provide organized attendance reports.
- To filter Present and Absent records.
- To visualize attendance data using charts.

2.1.Scope

The system can be used by colleges and educational institutions to maintain student attendance records for different subjects, dates, and faculty members.

Student Name	Register Number	Department	Year	Section	Email	Phone Number
Keerthana M	110	CSE	3rd Year	B	keertana110@gmail.com	+919546247632
Vignesh S	109	CSE	3rd Year	B	vignesh109@gmail.com	+91787282789
Nithya R	108	CSE	3rd Year	A	nithya108@gmail.com	+915673878753
Sanjay V	107	CSE	3rd Year	A	sanjay107@gmail.com	+91987543728
Harini P	106	CSE	3rd Year	B	harini106@gmail.com	+918754408742
Rahul K	105	CSE	3rd Year	B	rahul105@gmail.com	+918764983420
Divya M	104	CSE	3rd Year	B	divya104@gmail.com	+916380936727
Kavin R	103	CSE	3rd Year	A	kavin103@gmail.com	+919442634087
Priya S	102	CSE	3rd Year	A	priya102@gmail.com	+918123657178
Arun Kumar	101	CSE	3rd Year	A	arun@gmail.com	+919876543210

Figure 2-Attendance Entry Form

3.Technology Used

The application was developed using **Zoho Creator**, a low-code application development platform.

The main features used in this project are:

- Forms for data entry
- Lookup fields for connecting student information
- Reports for displaying records
- Search and filtering
- Charts for data visualization

The low-code approach reduces development time and makes the application easier to modify.

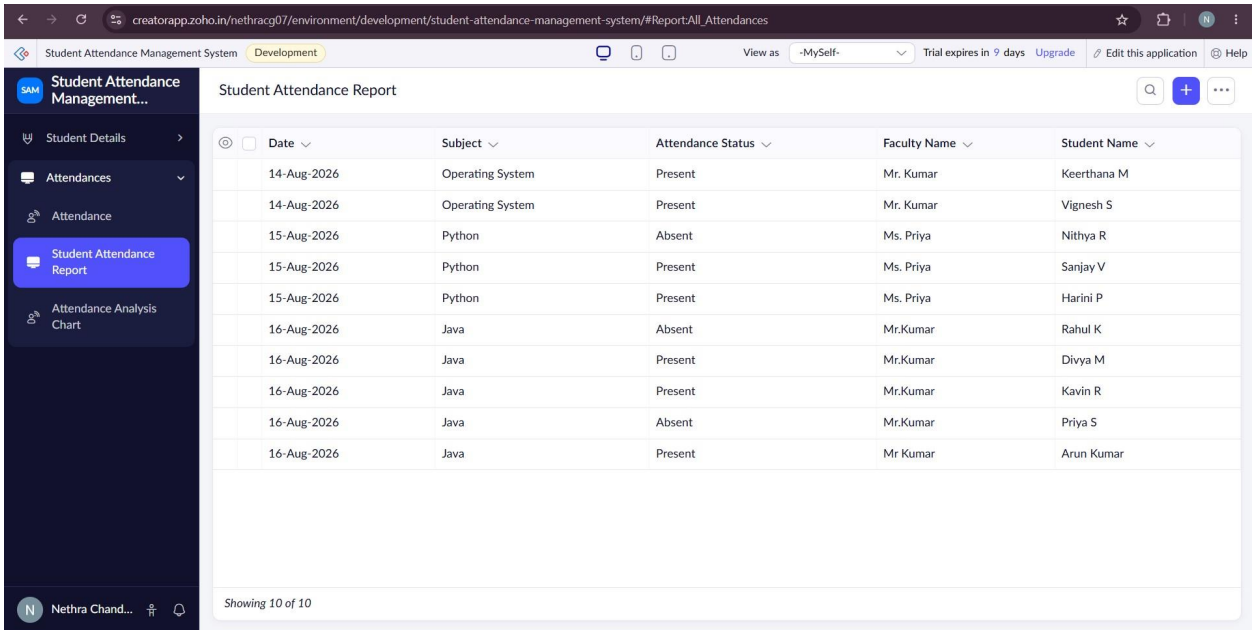

Figure 3 – Attendance Records

4.Student Details Module

The Student Details module stores important information about students. The fields include:

- Student Name
- Register Number
- Department
- Year
- Section
- Email
- Phone Number

This information is used while recording attendance and helps maintain a centralized student database.

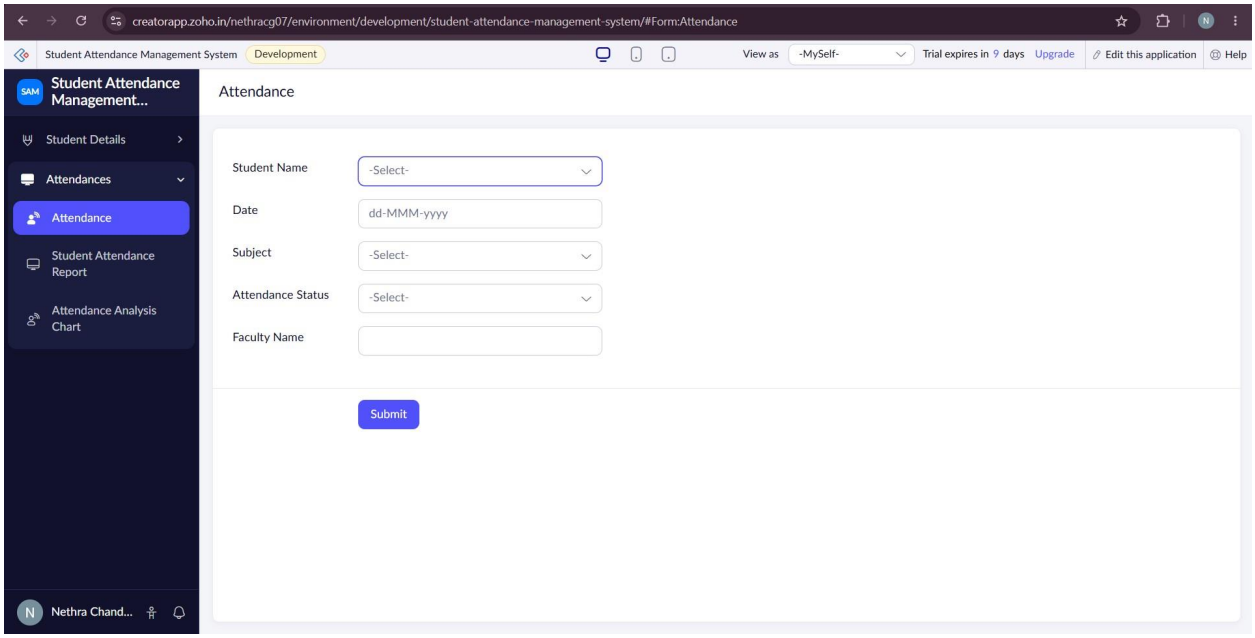

Figure 4 – Student Details Report

5.Attendance Module

The Attendance module is used to record the attendance of students.

The main fields are:

- Student Name
- Date
- Subject
- Attendance Status
- Faculty Name

The Attendance Status field contains **Present** and **Absent** options. The Student Name can be selected using the student information stored in the system.

The recorded information is automatically available in the attendance report.

6.Attendance Report

Student Attendance Report

The Student Attendance Report displays all attendance records in a tabular format.

It contains the date, subject, attendance status, faculty name, and student name. The report also provides a search option that can be used to filter records.
For example, the attendance status can be filtered to display only **Present** or **Absent** students.

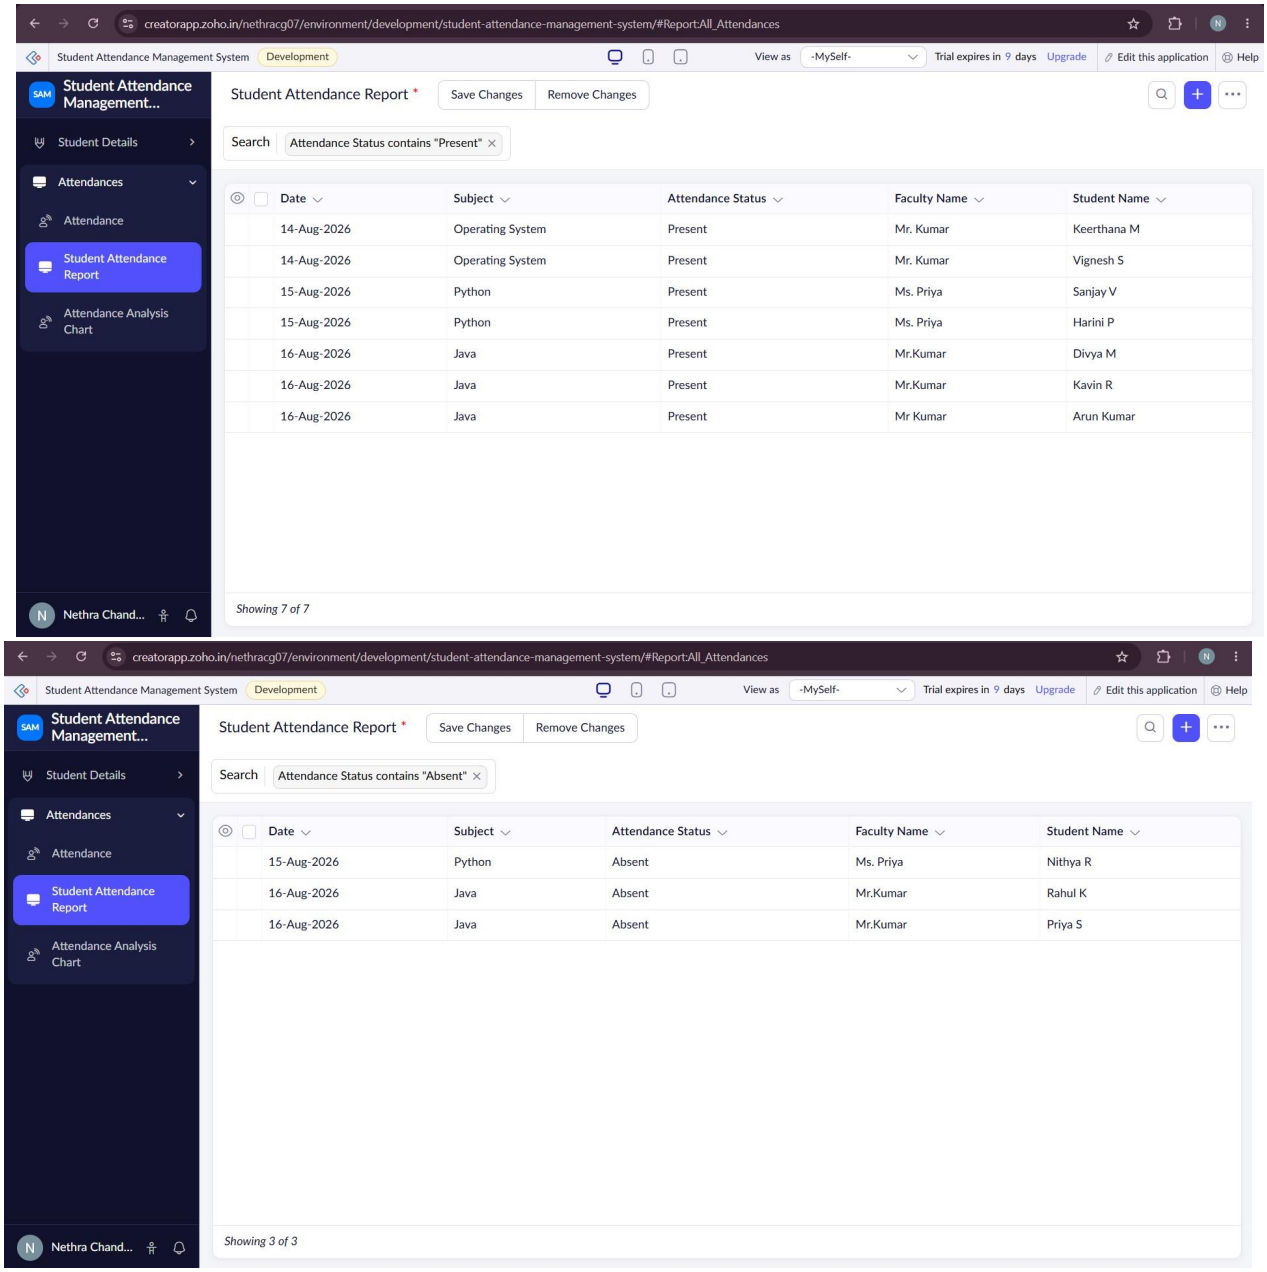

Figure 5 – Student Attendance Report

7.Attendance Analysis

An Attendance Analysis Chart was created to represent the attendance data visually.A **pie chart** was used with Attendance Status as the category and Student Name count as the value.

For the sample data:

- **Present – 7 students (70%) ● Absent – 3 students (30%)**

The chart makes it easier to understand the overall attendance distribution.

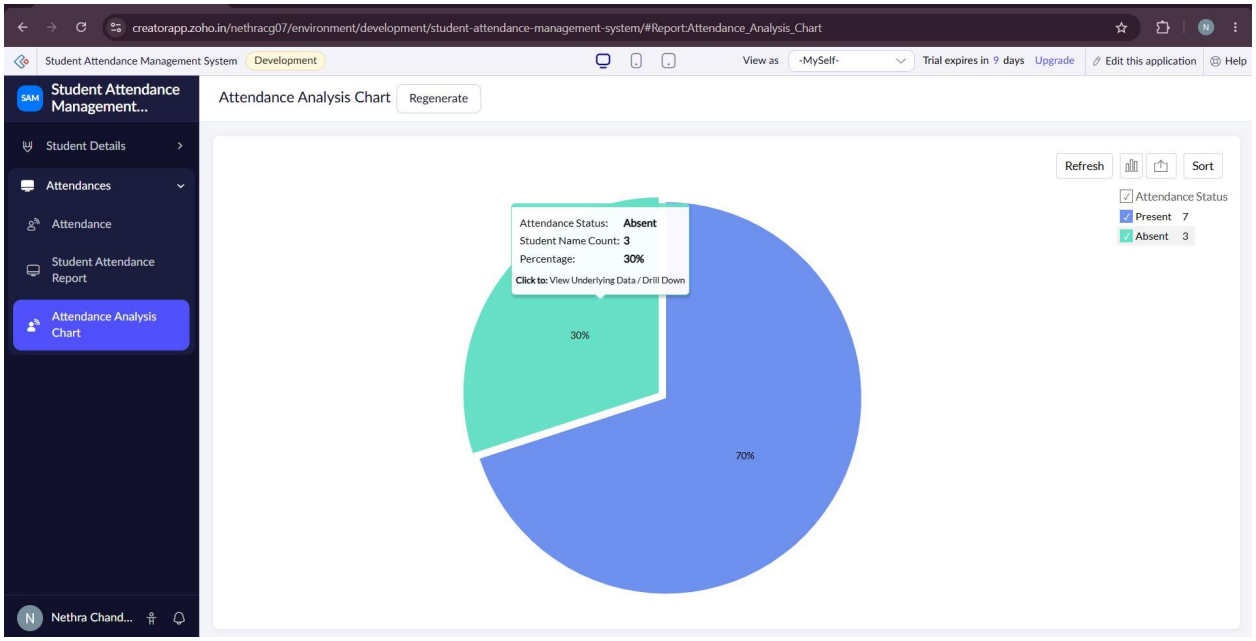

Figure 6 – Attendance Analysis Chart

8.Conclusion

The **Student Attendance Management System** was successfully developed using Zoho Creator. The application provides an organized way to maintain student information, record attendance, generate reports, filter attendance records, and analyze attendance visually.

The project demonstrates how a low-code platform can be used to create a practical attendance management application with minimal programming effort.(
