EXP:05 DASHBOARD USING ZOHO CREATOR (INTERNSHIP MANAGEMENT SYSTEM – DASHBOARD)

1. Introduction

The Internship Management System is a low-code application developed using Zoho Creator. It is designed to organize internship-related information, including student registrations, company details, internship applications, approvals, attendance, and evaluations.

The dashboard provides a summarized view of key application information through metric cards and charts. It helps users understand application status, internship working hours, and average evaluation ratings in one place.

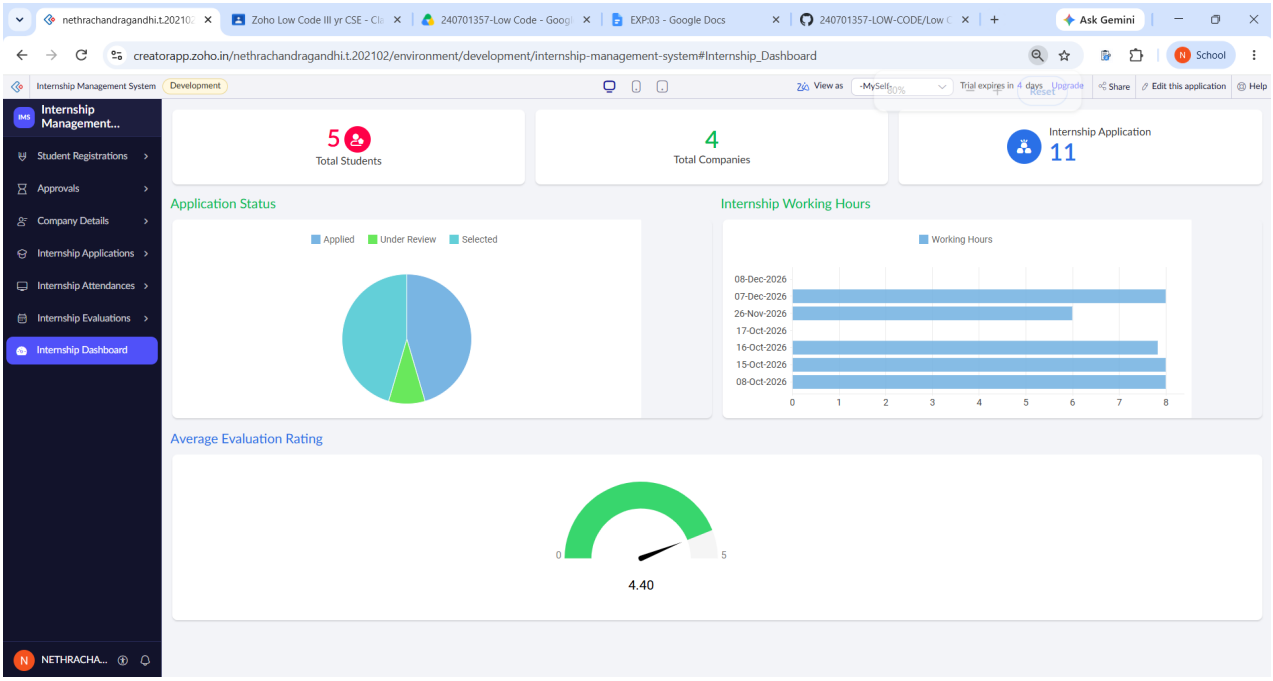

Figure 1 – Internship Management System Dashboard

2. Objectives

- To maintain student and company information in a centralized application.
- To manage internship applications and their review status.
- To support the approval process for internship applications.
- To maintain internship attendance and evaluation records.
- To display important application metrics through a dashboard.
- To visualize application status and working-hour information using charts.

3. Technology Used

The application was developed using Zoho Creator, a low-code application development platform. Forms are used to collect data, reports display records, workflows automate actions, and Deluge scripts support application logic. Dashboard charts provide visual summaries of the recorded data.

4. Dashboard Components

4.1 Total Students

The dashboard displays 5 as the total number of students. This metric gives a quick overview of the student records available in the application.

4.2 Total Companies

The dashboard displays 4 as the total number of companies. This helps users view the number of company records maintained in the system.

4.3 Internship Applications

The dashboard displays 11 internship applications, providing a summary of the application records.

4.4 Application Status

A pie chart represents application status categories: Applied, Under Review, and Selected. The chart provides a visual overview of the distribution of applications across these statuses.

4.5 Internship Working Hours

A horizontal bar chart displays internship working-hour records by date. The chart makes it easier to compare the values recorded for different dates.

4.6 Average Evaluation Rating

A gauge chart displays an average evaluation rating of 4.40 out of 5. It provides a quick visual indication of the average evaluation score shown in the dashboard.

5. Testing and Observation

The dashboard was reviewed to check that the metric cards and visualizations were displayed. The captured dashboard shows 5 students, 4 companies, 11 internship applications, an application status pie chart, a date-wise working-hours bar chart, and an average evaluation rating of 4.40/5. These values reflect the screenshot and may change when application records are updated.

6. Conclusion

The Internship Management System dashboard provides a consolidated view of important internship information using metric cards and charts. It presents student and company totals, internship application status, working-hour records, and the average evaluation rating. The project demonstrates how Zoho Creator can be used to build a low-code application with organized records and visual summaries.
