EXP 11 – PORTAL USER PERMISSIONS

1. Aim

To configure and review portal user permission profiles in Zoho Creator so that different portal user types have access to appropriate application modules and reports.

2. Procedure

1. Open the application in Zoho Creator and navigate to Settings.
2. Select Portal User Permissions under Permissions.
3. Review the available permission profiles: Customer, Student, and Company.
4. Open each profile and inspect its description and module-level access settings, including Access, View, Edit, Delete, and More where displayed.
5. Save changes with Update only when a permission setting has intentionally been changed.

3. Configured Portal Profiles

3.1 Customer

The Customer profile description states that it is the default profile with add and view permission. The screenshot shows Access enabled for Company Details, Internship Application, Internship Attendance, Internship Evaluation, Student Registration, and Internship Dashboard. The displayed Edit and Delete boxes are not selected.

3.2 Student

The Student profile is described as allowing students to view permitted internship information and manage their own applications. In the screenshot, Access is enabled for Company Details and Internship Application, with the Company Report and Internship Application List selected for viewing. Other displayed module access boxes are not selected.

3.3 Company

The Company profile description states that a company can post internships and view applications submitted to it. In the screenshot, Access is enabled for Company Details, Internship Application, and Internship Attendance. The displayed view selections include Company Report and Internship Application Report.

4. Screenshots

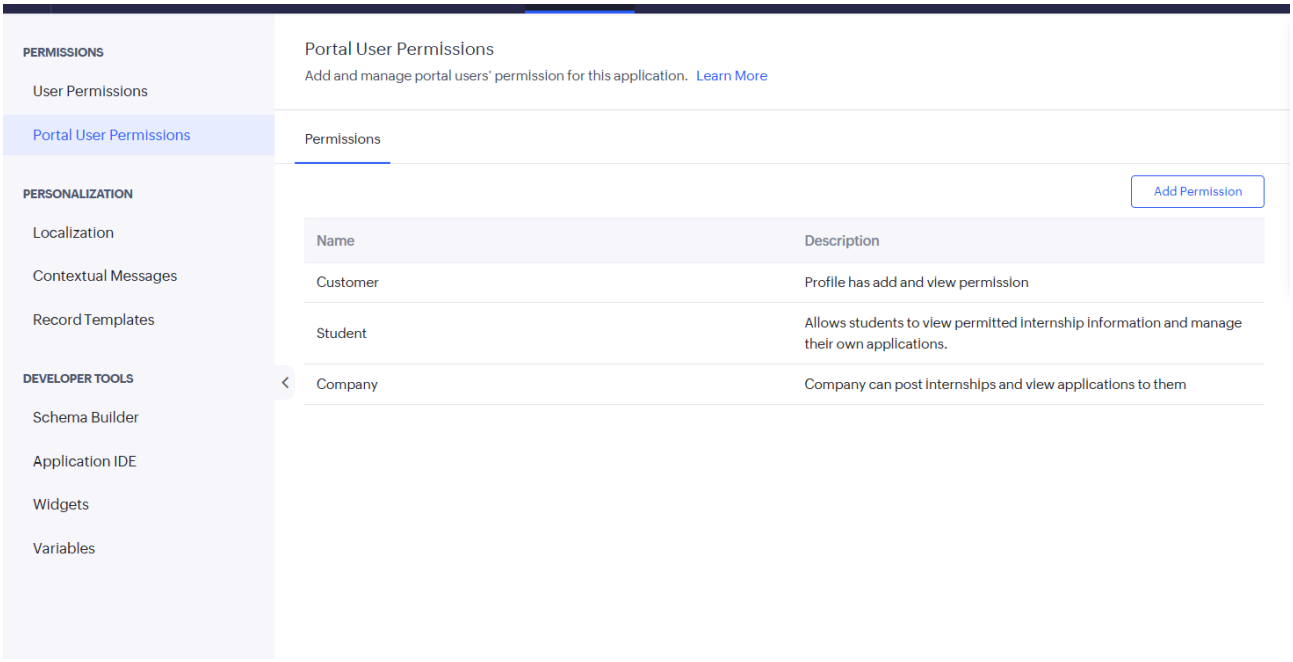

Figure 11.1: Portal permission profiles listed in Zoho Creator.

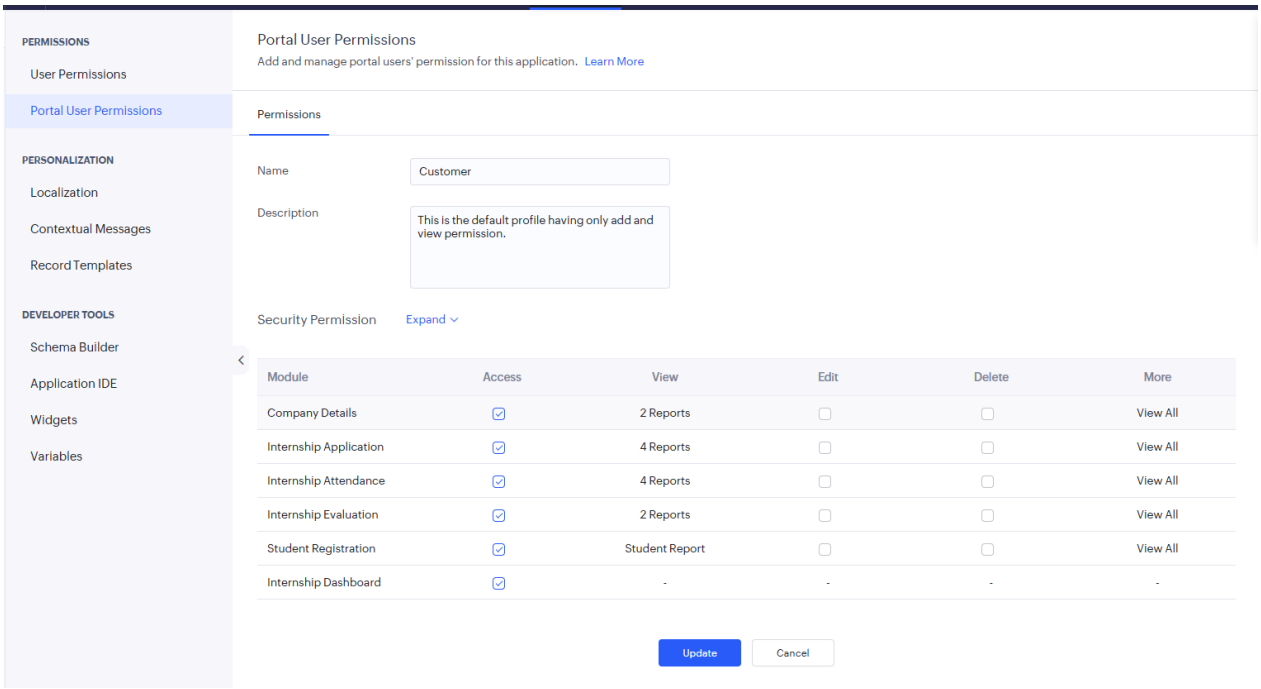

Figure 11.2: Customer profile with add and view access configured for the listed modules.

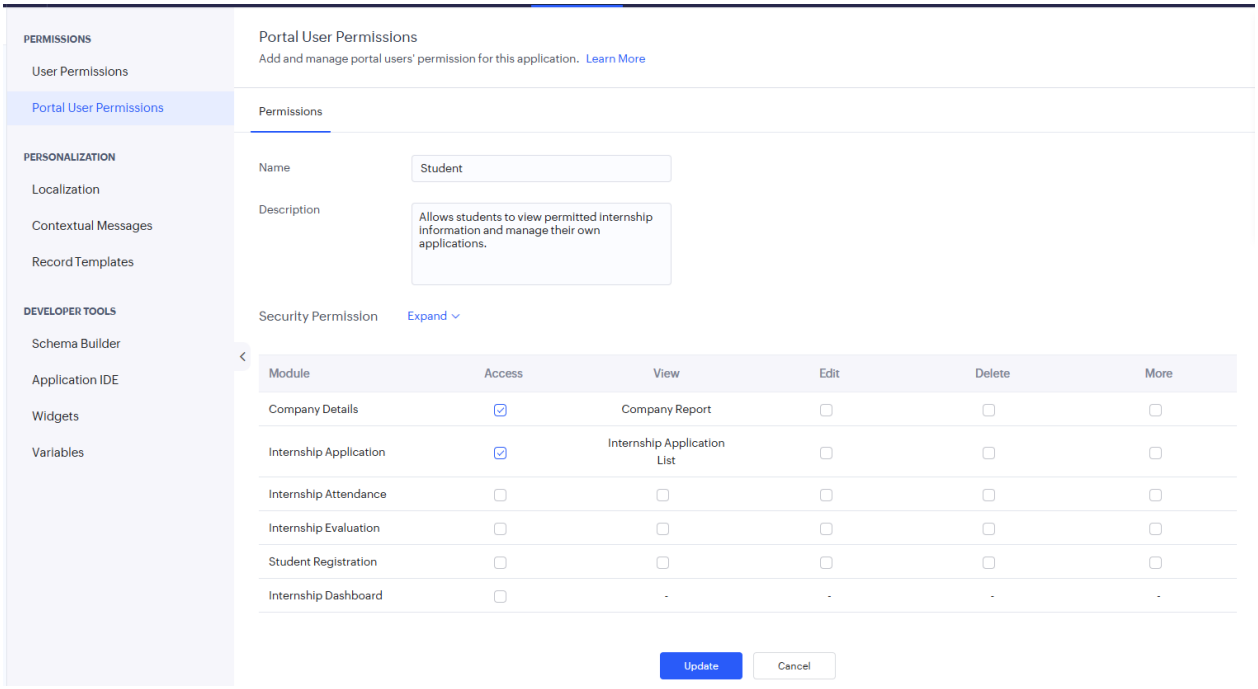

Figure 11.3: Student profile with selected view access to Company Details and Internship Application.

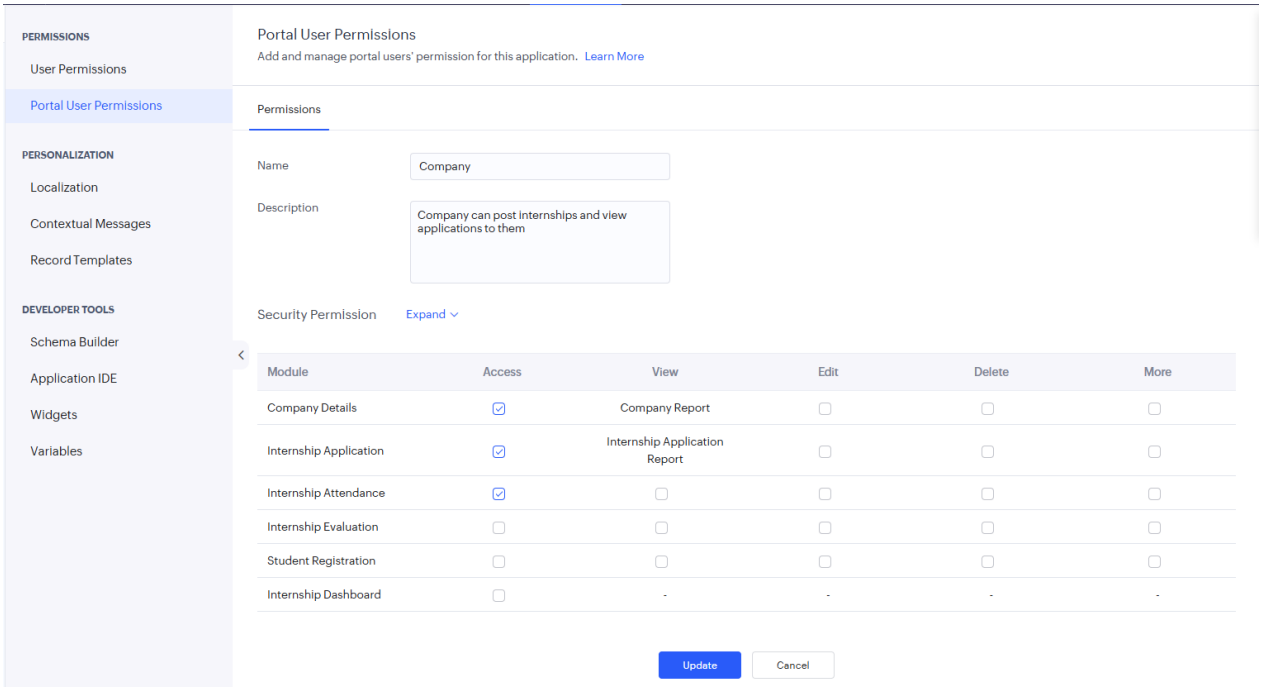

Figure 11.4: Company profile with selected access to company, application, and attendance information.

5. Result

The Customer, Student, and Company portal permission profiles were reviewed in Zoho Creator, and their displayed module access and report visibility settings were documented.

6. Conclusion

Portal user permissions help control which application modules and reports are available to different portal user categories. The configured profiles provide a basis for separating customer, student, and company access.
